| Checking python package "math" is NOT available [!] | FAIL |
| Checking sysfs on /sys type sysfs (rw) mounted | PASS |
| Checking /dev/nonex on /nodir type noopt (any) NOT mounted [!] | PASS |

- number of tests: 6
- number of failures: 1

Notes

About this documentation

This documentation uses the AsciiDoc documentation generator. It is a convenient format that allows using plain-text formatted writing that can later be converted to various output formats such as HTML and PDF.

In order to generate an HTML version of this documentation, use the following command (the asciidoc package will need to be installed in your Linux distribution):

```
$ asciidoc main.adoc
```

This will result in a README.html file being generated in the current directory.

If you prefer a PDF version of the documentation instead, use the following command (the dlatex package will need to be installed on your Linux distribution):

```
$ asciidoctor-pdf main.adoc
```
